

Description

With shock proof design, the BV1209/MOV mini dome has been developed to suit in all mobile applications while protecting the camera's components and with no doubt delivers the best video transmission and recording. This mini dome with high dynamic range features captures both bright and dark portions of a scene with the best registration of video under the toughest light intensity changes that are typical in automotive scenes.

An additional feature is the high frame rate that helps the image stabilization. improved autofocus response and action - sequence capturing burst modes that lets you catch the events right in the scene without losing detail. It's 1080P HD resolution enables the CCTV system to register sharp, colorful and smooth moving video in a variety of lighting environments. No matter the temperatures, this camera is tested to perform reliably in extreme environments. All of these features and benefits make out BV1209/MOV a "strong to consider device" when talking about reliability in mobile solutions and the best surveillance in motion.

Optical information

Image sensor	1/2" Aptina
Resolution	1080P HD
